

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listing of claims, in the Application.

Listing of claims:

1. (Currently amended) A method of transmitting data from a source system to a target system over a network, said data being divided into a number of packets before transmission, the method comprising the steps of:

determining whether the number of packets exceeds a threshold number;

establishing a plurality of TCP/IP network connections to transfer the packets in parallel if the number of packets exceeds the threshold number;
and

transmitting the packets in parallel, ~~if the number of packets exceeds the threshold number,~~ each packet having an indicium for properly reconstructing the data by the target system.

2. Canceled.
3. Canceled.
4. (Currently amended) The method of Claim [[3]] 1 wherein each packet has an IP header, said IP header having an IP identification field.
5. (Original) The method of Claim 4 wherein the indicium is placed in the IP identification field.

AUS920010897US1

6. (Currently amended) A computer program product on a computer readable medium for transmitting data from a source system to a target system over a network, said data being divided into a number of packets before transmission, the computer program product comprising:

code means for determining whether the number of packets exceeds a threshold number;

code means for establishing a plurality of TCP/IP network connections to transfer the packets in parallel if the number of packets exceeds the threshold number; and

code means for transmitting the packets in parallel, ~~if the number of packets exceeds the threshold number~~, each packet having an indicium for properly reconstructing the data by the target system.

7. Canceled.

8. Canceled.

9. (Currently amended) The computer program product of Claim [[8]] 6 wherein each packet has an IP header, said IP header having an IP identification field.

10. (Original) The computer program product of Claim 9 wherein the indicium is placed in the IP identification field.

11. (Currently amended) An apparatus for transmitting data from a source system to a target system over a network, said data being divided into a number of packets before transmission, the apparatus comprising:

AUS920010897US1

means for determining whether the number of packets exceeds a threshold number;

means for establishing a plurality of TCP/IP network connections to transfer the packets in parallel if the number of packets exceeds the threshold number; and

means for transmitting the packets in parallel, ~~if the number of packets exceeds the threshold number~~, each packet having an indicium for properly reconstructing the data by the target system.

12. Canceled.
13. Canceled.
14. (Currently amended) The apparatus of Claim 43 11 wherein each packet has an IP header, said IP header having an IP identification field.
15. (Original) The apparatus of Claim 14 wherein the indicium is placed in the IP identification field.
16. (Currently amended) A computer system for transmitting data to a target system over a network, said data being divided into a number of packets before transmission, the computer system comprising:

at least one memory device for storing code data; and

a plurality of processors for processing the code data to determine whether the number of packets exceeds a threshold number, to establish

AUS920010897US1

a plurality of TCP/IP network connections to transfer the packets in parallel if the number of packets exceeds the threshold number, and to transmit the packets in parallel, if the number of packets exceeds the threshold number, each packet having an indicium for properly reconstructing the data by the target system.

17. Canceled.
18. Canceled.
19. (Currently amended) The computer system of Claim 48 16 wherein each packet has an IP header, said IP header having an IP identification field.
20. (Original) The computer system of Claim 19 wherein the indicium is placed in the IP identification field.
